

Tile Ditch Closer

(Now with depth wheels)

Arms adjust out to 8' - Category 2 and/or 3 hitch - 32" notched blades

Full Out: Front 8'

Full In: Back 2'

3" Hardend Steel Axles
8,000 lbs. Hub

This product fills in the ditch leaving small ridge for the dirt to naturally settle. A tractor of at least 65 H.P. is needed to pull this machine. The width can easily be adjusted from inside the tractor to accommodate the width of your ditches.

Tile Cart

Johnson Drainage Plows started building tile carts in 1989.

We continue to make improvements to our carts. Walking tandems, increase the size of the table from 10 feet to 11 feet. The eleven-foot table and longer 10" tube make it easier to handle maxi coils of tile. The flat side makes the cart more rugged and doesn't make a difference when going down the road or unrolling the tile.

The table consists of 24 1 1/2" by 1/8" walled square tubing. I use a 3" axle to support the table. All carts come with a hydraulic brake.

Optional: power pack
